

SCHEDULE 1 - PCGP

Pediatric Cancer Genome Project (PCGP) Data Set Publications Policy

The primary purpose of the St. Jude Children's Research Hospital – Washington University Pediatric Cancer Genome Project (PCGP) is to identify all inherited and tumor-acquired (somatic) genome sequence and structural variants influencing the development and behaviour of childhood tumors. Additional objectives include, but are not limited to, the acquisition and analysis of additional genomic data, including epigenetic and gene expression data, data integration, and the development and validation of informatic and analytical solutions appropriate to the scale and nature of the project, as well as use of the data generated to answer important methodological and biological questions studies of tumor biology in general, and as specifically related to childhood malignancies.

The PCGP anticipates that data generated from the project will be used by other researchers (scientists who are employed by, or a student enrolled at or legitimately affiliated with, an academic, non-profit, or government institution, or a commercial company) to develop new analytical methods, validate results, and identify additional genetic variations and alterations in the data.

Authors who use data from the project must acknowledge the PCGP using the following wording "*This study makes use of data generated by the St. Jude Children's Research Hospital – Washington University Pediatric Cancer Genome Project*" and cite the relevant primary PCGP publication if one has been published. Specifically, authors using data for a given tumor type(s) must cite the publications arising from the PCGP that have described the results of the analyses of primary genomic data for the tumor type(s). Details of these publications are at the PCGP website: <https://pecan.stjude.org/permalink/pcgp>

Users should note that the PCGP bears no responsibility for the further analysis or interpretation of these data, over and above that published by the PCGP.
